**Bulletin No. 013**

**Issue Date:** April 1, 2013

**Product:** Model J Booster Heaters

**Component:** Heating Elements

**Purpose:** To provide field service technicians with specific information regarding product service or operation.

**Background:** In an effort to provide the highest quality, longest lasting booster heaters in the foodservice industry, Hubbell will now supply an incoloy sheathed heating element for any element at or above 9000 Watts. This change will eliminate six part numbers and create six new part numbers. Please see below for a breakdown of the changes.

**Current Status:** Effective April 1, 2013 the following part numbers changes will take place:

OLD PART NUMBER	NEW PART NUMBER
C2315-9	N2375-9
C2315-10	N2375-10
C2315-20	N2375-20
C2315-21	N2375-21
C1315-32	N2375-32
C1315-33	N2375-33

**Remarks/Action:** The benefit of an incoloy sheathed heating element is that it provides stronger corrosion resistance compared to the copper sheath style element it replaced. Furthermore, the new element also has a thicker tubing, which reduces watt density and creates lower surface temperatures throughout the element. The end result is a significant upgrade in the quality and longevity of the heating element for the end user.
