SERVICE BULLETIN

Bulletin No. 004

Issue Date: December 27, 2006

Product: Model J Booster Heaters

Purpose: To provide field service technicians with specific information regarding product service or operation.

Background: The J6 Model Booster Heater Tanks are now manufactured with a threaded brass nipple diffuser for the inlet and outlet connections. The brass diffuser assembly is fully removable and replaceable if necessary.

Current Status: Effective as of December 15, 2006 all J6 Model booster heaters shipped from the factory will be manufactured with this new style inlet and outlet diffuser.

Remarks/Action: This new design replaces the welded inlet and outlet diffuser used previously. The new threaded brass nipple includes a high temperature plastic diffuser, inserted inside the nipple, which is not to be removed. During installation care should be taken so as not to turn the diffuser assembly.
