FOR IMMEDIATE RELEASE:

Hubbell Introduces New High Efficiency Heat Pump Water Heater at AHR 2011

Stratford, CT January 26, 2011 – Hubbell Electric Heater Company will be exhibiting its new line of high-efficiency Heat Pump Water Heaters at **booth #N5015** at the **AHR Expo**, on January 31 – February 2, Las Vegas Convention Center in Las Vegas, Nevada.

The newest addition to Hubbell’s line of high efficiency water heaters combines the benefits of a long lasting cement lined electric water heater with the energy savings of a heat pump. The PBX is an ultra efficient water heater that is easy to install, operate and maintain. It significantly reduces energy consumption and lowers operating costs by combining the industry’s most proven and long lasting tank design with the newest in high efficiency heat pump technology.

“The PBX was designed for the homeowner who wants a reliable water heater that delivers plentiful amounts of hot water, significantly reduces energy consumption and can provide considerable savings”, says Sean Clarke, National Sales Manager. The Hubbell PBX heat pump water heater is built upon current field-tested and time proven heat pump technology with an installed base of over 20,000+ units over the past 15 years. Manufactured in the USA at the company’s Massachusetts and Connecticut plants, the Hubbell PBX heat pump water heater is the perfect choice for homeowners interested in high efficiency energy saving water heating.

The Hubbell PBX heat pump water heater is available in 50, 65 or 80-gallon tank sizes and can meet the hot water needs of most homes in the US. The Hubbell PBX water heater also features an electronic smart controller, which simplifies operation and service and ensures that the heater is performing at industry leading efficiency levels. For additional savings, the controller can operate the water heater as a “time of use” device when “off peak” pricing is provided by the homeowner’s electric utility.

The Hubbell PBX integrated heat pump water heater is now available and complements the company’s existing line of high efficiency water heaters, including a full line of point-of-use and whole house electric tankless water heaters. With the introduction of its heat pump water heater, Hubbell has provided the homeowner with a long lasting water heater that is the best value for those interested in high efficiency energy saving water heating.
